

MVO & RF optimization & planning

Abilities & Services

- RF designing for MNOs
- Optimizing any RF network & plan
- Monitoring & optimizing software Development

Developed Software

Automatic Reporting Software

A Significant work of MVO includes regular NodeB/eNodeB/RNC/cell site audits on an agreed schedule to provide optimization teams with reliable parameters.

ICI has its own in-house web based audit and reporting software that can be developed based on our customer needs. We claim that our system has enough features and its completely localized to satisfy MNO's needs such as:

- All required regular audit from 2G/3G/4G/5G network can be automated based on MNO requirements.
- Data comparison with other reports (TSSR and etc)
- Regular NodeB/eNodeB/RNC/BSC Audit
- Atoll update and correction
- HW/SW Audit
- Feature Audit

Developed Software

UCMS

UCMS is a local developed software which designed to be replaced by Huawei SDM,
It not only covers all features of SDM but also has many new features which makes it easier to use and more secure,
It will handle below items:

- Preventative Maintenance Management
- Corrective Maintenance Management
- Access and Permission Management
- QA/SSA Site Handover Management
- Change Request Management
- Trouble Ticket Management
- SLA Management
- FPA Management
