

Indoor Optical Break Out Cable (OBOC)

Applications

- Suitable for FTTX networks
- Data cable in distribution networks
- For patch cable and protected cable conduits
- Ideal for application involving high safety requirements in case of fire
- Used as connectors in optical communication equipment rooms and optical Distribution frames
- For horizontal and collapsed backbone cabling
- Laying with air blown

Features

- Metal free indoor cable
- For direct connector assembly with strain relief
- Halogen free and non-corrosive fire gases by LSZH Sheath
- Low fire load for high safety requirements
- Simple installation and usage
- Suitable bending radius
- Each fiber strain relieved

Options

- Available with LSZH or other jacket for flame retardant or any other features (Like PVC or ...)
- Available with special Design according to the customer Request
- Delivery length is as customer request
- Other color coding is available according to the customer Request
